

## ZoneAlarm 6.0 At A Glance

A Check Point  
COMPANY

### **Launch:**

ZoneAlarm 6.0

### **Availability:**

Rolling launch begins July 11

### **Products:**

ZoneAlarm Anti-Virus, ZoneAlarm Pro, ZoneAlarm Internet Security Suite

### **Overview:**

ZoneAlarm 6.0 continues Zone Lab's legacy of innovation by creating a proactive, multi-layer Internet security solution to protect users from the most malicious existing and emerging threats on the Internet today. Integrating a new OS firewall, an intelligent spyware scanning and removal feature, and a powerful, community-based integrated threat discovery and dissemination system called DefenseNet, ZoneAlarm 6.0 intuitively protect against increasingly malicious spyware programs and emerging kernel-level threats, such as rootkits, by residing within the PC and monitoring activity to provide a new level of granular security (see features below for product integration).

### **New Technologies Introduced:**

#### Triple Defense Firewall:

An evolution of our tried and true stateful inspection stealth firewall, our new Triple Defense Firewall barricades the PC and its ports from external attack and makes the PC invisible (via the multi-layered network firewall); prevents spyware and other malicious programs from attacking legitimate programs (program firewall); and prevents spyware and other malicious programs from attacking the operating system (new OS firewall).

Available in: ZoneAlarm Pro, ZoneAlarm Anti-Virus, and ZoneAlarm Internet Security Suite

#### Anti-Spyware:

Intelligent anti-spyware scanning and removal feature automatically prevents, detects and treats spyware and viruses in one convenient, integrated system to protect the privacy and personal information of our customers

Available in: ZoneAlarm Pro and ZoneAlarm Internet Security Suite

### **Spotlight on:**

#### SmartDefense Service:

Provides real-time updates and new attack protection capabilities for ZoneAlarm products. This Check Point/Zone Labs security service is the brain behind a wide range of services, from SmartDefense Advisor (formerly Automatic Program Advisor) and DefenseNet to Kill Control and virus and spyware tracking, intelligence gathering and policy deployment.

#### SmartDefense Advisor (formerly Automatic Program Advisor):

Automatically passes expert security policy to users, now comes with new Automatic Kill Control to automatically disable any program that attempts dangerous activity.

#### DefenseNet (enhanced):

An early warning system for new spyware and malware. It leverages our community of ZoneAlarm users who can choose to anonymously and automatically share their program policies with us. Armed with this data, we can quickly deploy policy to protect the millions of ZoneAlarm users from the latest spyware and attacks. In force for over a year, DefenseNet has already proven to be a powerful addition to our security arsenal.

Available in: ZoneAlarm Anti-Virus, ZoneAlarm Pro and ZoneAlarm Internet Security Suite
